

DUBLIN RANCH BASIN

DUBLIN, CA

Project Description

A new, mixed-use development along the 580 freeway in Dublin is required by state and regional water quality control regulations to treat all the development's storm water prior to entering the city storm water system. Through thoughtful site planning and design, CMG is insuring that this 10 acre drainage basin becomes more than a necessary piece of infrastructure.

Using sculptural landforms, and allowing limited public access, the basin becomes a public amenity. CMG is working closely with a team of hydrologic engineers and native plant and habitat restorers to create a landscape feature that enhances adjacent property values, evinces sustainable stormwater management practices and is an important component of a broader open space system.
